We are here to control the light to make it Efficient in Specific Applications. We are expert in designing and manufacturing of lenses because our optical and tooling knowledge makes our lens more Efficient and cost Effective.

# ABOUT US

With a vision to become global market leaders in the lighting sector, Optiks Mechatronics has been manufacturing and selling smart LED optical lens solutions ever since its inception in 2015.

The philosophy at the core of everything we do is to think different, think big, think future and always aim for excellence!

Founded by Mr. Kapil Kaushik with over 25 years of experience in the Lighting & Tooling industry, and Dr. Tanu Sharma with over good experience of Optics Design.

Optiks has always been a place for innovation which is why he started the in-house development of newer and optimized LED lenses using latest lightning technology with the aim to reduce imports and encourage Indians to support domestic industries instead.

The management team also includes Mr. Ramesh Dinkar Telang as the Vice President who oversees the development process and Mr. Pradyumna Shandilya, responsible for the growth of sales and business development.

Together, they have established a state-of-the-art manufacturing unit in Greater Noida where we use advanced machinery and the latest technology to produce approximately 50 lakh lenses every single day!

Apart from the manufacturing unit, our facilities also consist of a fully-equipped testing lab to inspect each batch thoroughly before packaging, a technology center for research & development proposes and a spacious warehousing area for safe storage of the finished products.

Optiks produces a wide range of both indoor and outdoor lenses with varying beam angles, sizes and lighting applications including everything from residential, architectural, stage, commercial spaces, stadiums, warehouses, showrooms to street lights and many more.

Additionally, we offer a full-customization option to cater to the needs of each and every client to the best of our abilities!

Our highly qualified expert technicians, engineers, researchers and managers ensure that every product is designed as per the customers need and is evaluated for 100% performance before leaving the unit.

Due to this attention to detail and adherence to perfection, we have been awarded ISO certification for all of our products that further proves that when it comes to quality, we leave no room for compromise.

Everything we have achieved has been because of the support of our team, our vendors, our partners and most importantly, our customers; And for that we are eternally grateful.

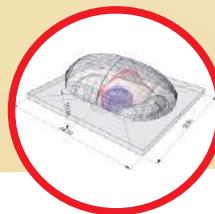

The Optiks team promises that we will always maintain fairness in our practices and dedication in our work so that we can continue to serve you the best products and keep your trust in us intact for years to come.

### Product Nomenclature

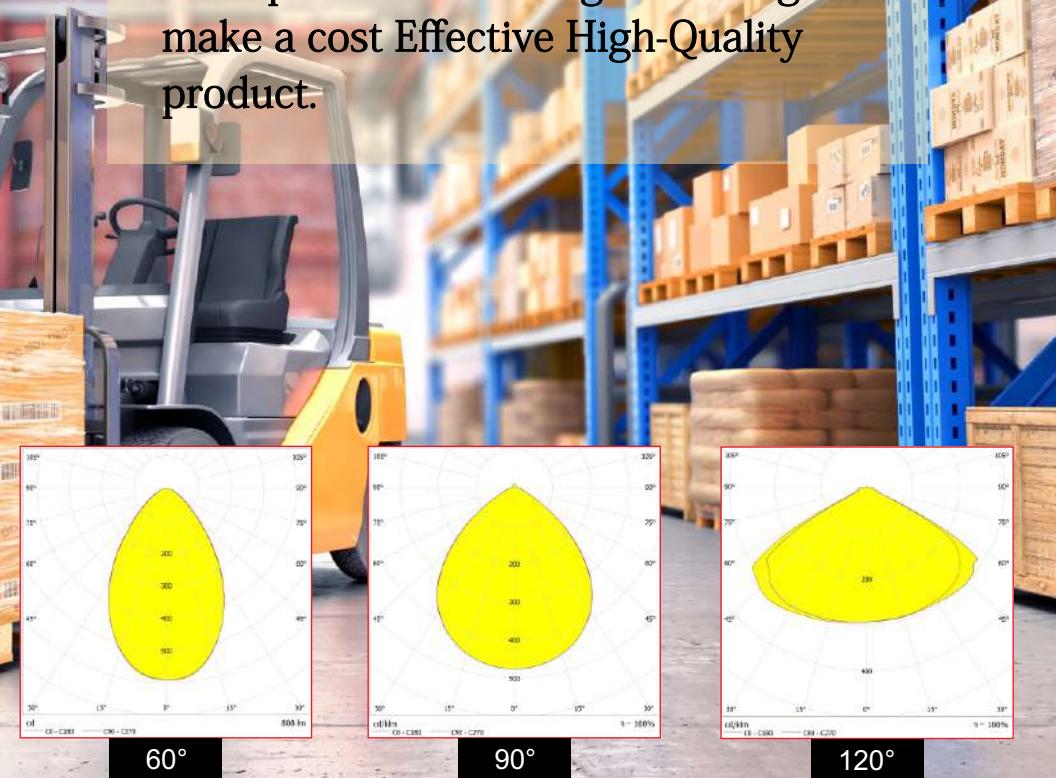

## Lenses

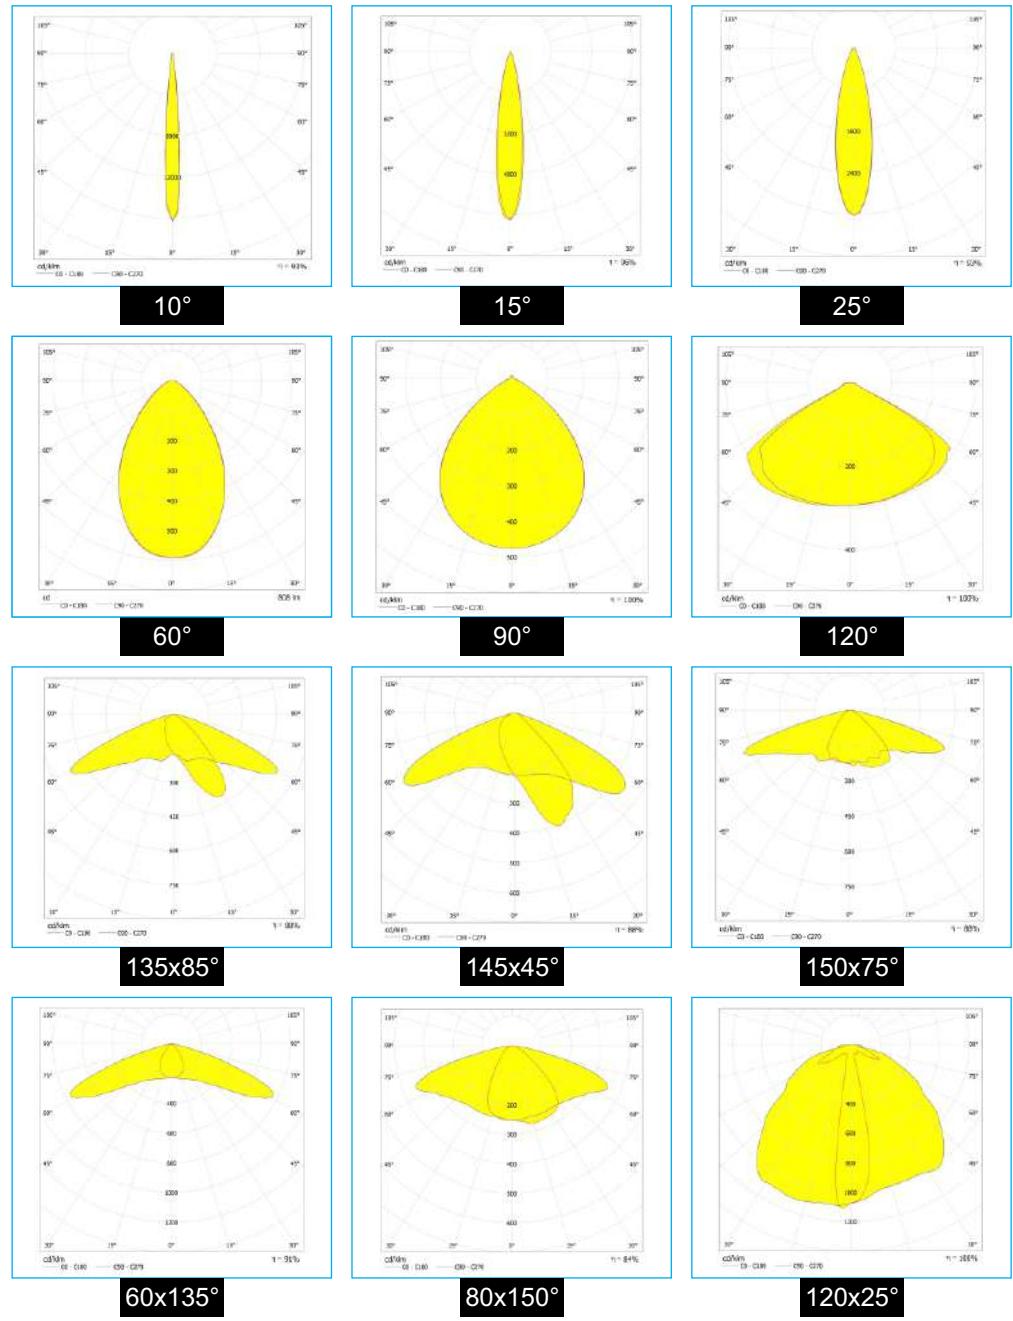

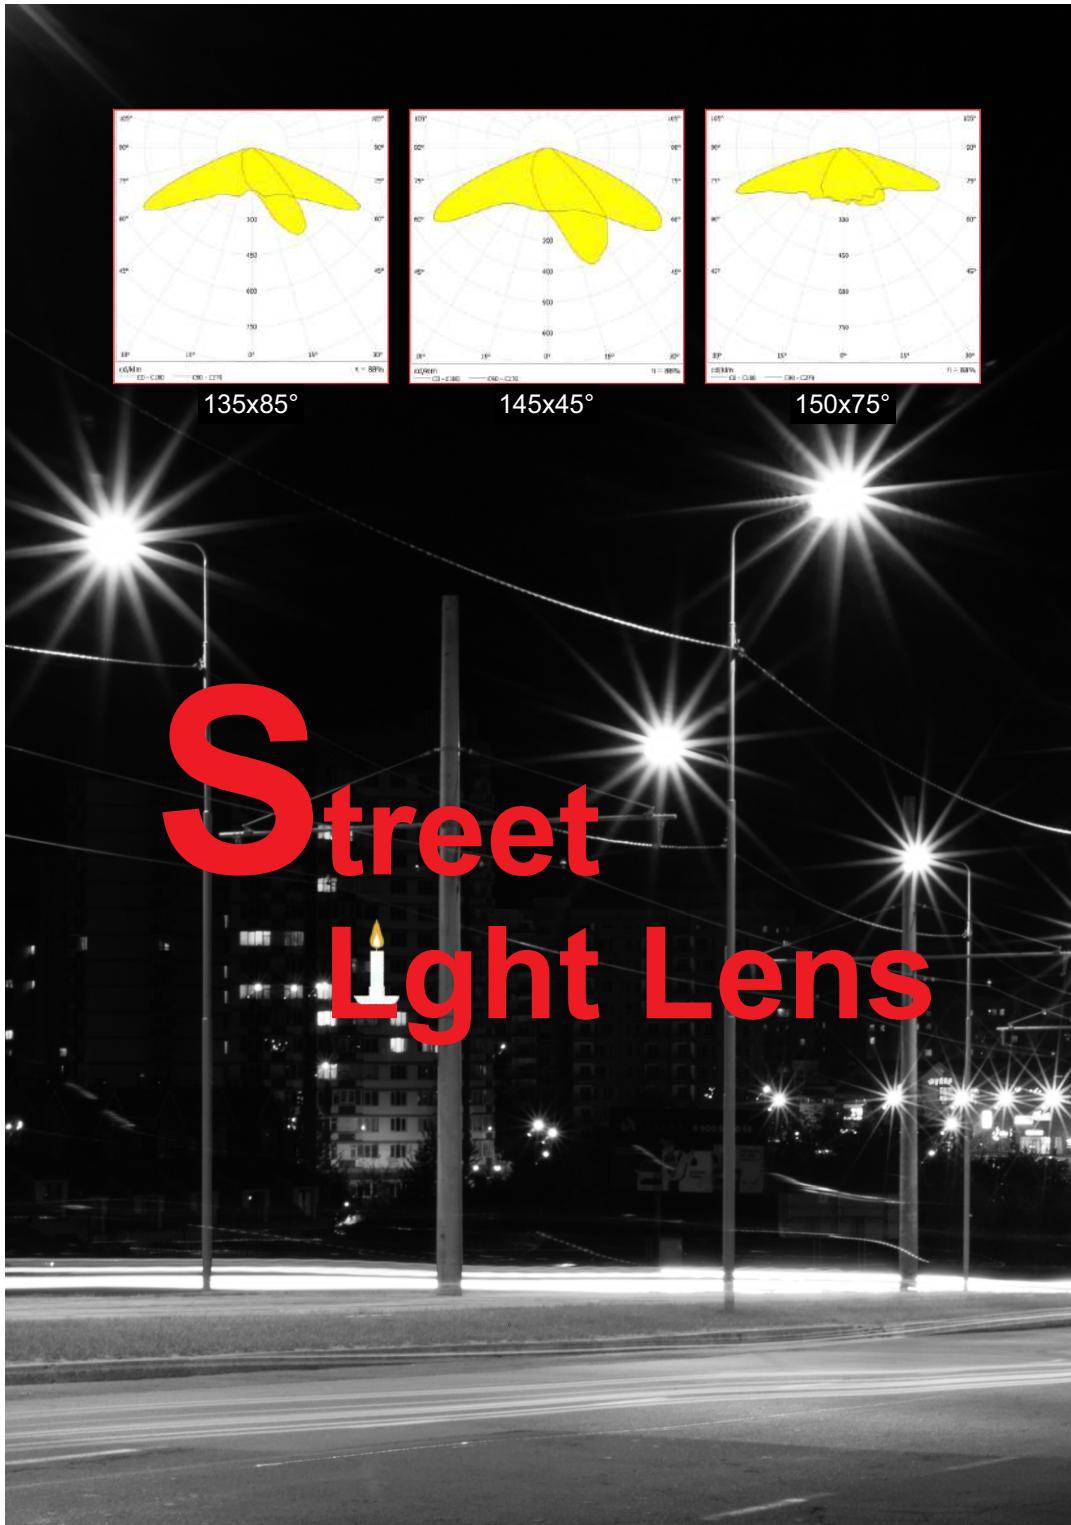

# INDUSTRIAL LIGHTING

Our Mission to help our Customer to optimize Optics performance by using our Optical and Tooling Knowledge to make a cost Effective High-Quality product.

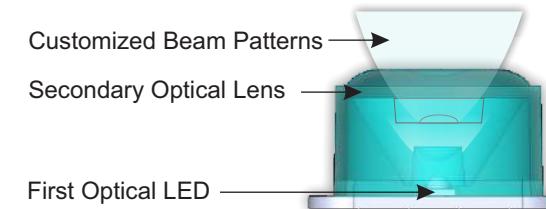

## Available Beam Pattern

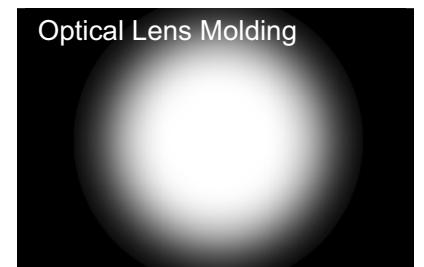

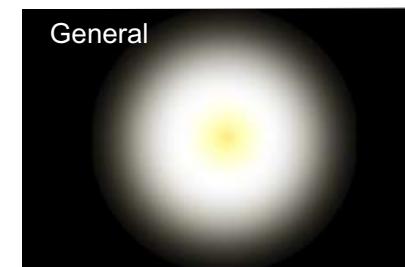

## Secondary Optical Lens

Generally LED need to proceed Secondary Optic Design to become Lamp fixture. We are using Secondary optical lense to focus light pattern in a defined way

### Difference Between General Molding and Optical Lens Molding

#### General Molding

- Low shape accuracy
- Defect by surface Shrinkage
- Defect by Air bubble formation
- Decrease Transparency
- Flatness over 1 mm

#### Optical Lens Molding

- High shape accuracy
- Non-surface Shrinkage
- Non -Air bubble formation
- High Transparency
- Flatness below 3 µm
